

Wintersport

Perennial Ryegrass

Sportsfields, passive recreation

Composition

- Esquire diploid
- Aspire diploid
- Karma diploid
- Double tetraploid

Sowing rate

- 2.5-4kg/100m²

Suitable for

- Council fields
- Schools
- Parks and reserves
- Amenity areas

Wintersport is a specially selected blend of both diploid and tetraploid perennial ryegrasses looking to create a combination that delivers durability in performance and versatility of use. Offering strong presentation with a resilience to deal with a range of situations and climates, this sportsfield specialist has genuine range and flex in its offer.

Key features

- Establishment speed
- Generous colour
- Strong disease resistance
- Good drought tolerance
- Good turf density

Key benefits

- Ability to sow early or late
- Quick to get up and fast to establish
- Responsive when given short seeding windows
- Strong reliable colour – no dilution within the blend
- Drought tolerance from enhanced root mass of the tetraploid
- Surface stability from the tetraploid root system
